

# A4-part 1

## Swag Depot

---

### 1. Description

Swag Depot is a social platform where people can be inspired by the latest trends in fashion. In addition to that, they also have the opportunity to inspire others with their own person fashion and style. Each user will have his or her own profile page, where he or she can upload photos to exhibit their latest styles and clothing items. Users will have the option to view, like, comment, and rate other users' style. Swag Depot's "Photo Stream" offers each user's the latest recommendation based on their own personal preferences. There will be admin accounts which have special privileges such as banning a user for posting inappropriate content.

### How it works

When users sign up to use our service, they will asked several questions about their styling preferences, where they can pick out the type of style that they are interested in. This will help Swag Depot filter out the content for that particular user. Users can then personalize their own profile page with a profile picture, and a brief description themselves. Of course, they can upload photos to inspire others of their styles. Each photo will have one or multiple tags, such as #casual or #formal in order to classify which trend/style is related to the posting. Users also will have access to Swag Depot's photo stream, which is a gallery of latest uploads from all users from Swag Depot. These uploads would be personalized for each user based the preferences they chose in the signing up process. In this mode, user can then view, like, rate and comment on the postings.
